

base on my knowledge there are many similarities and differences between plants and animals.

	<u>plants</u>	<u>animals</u>
plants grow plants	are things that grow out of the ground. need H_2O ,	are non-living things, they eat animals, they find bones.

both
they both need
 H_2O .
they both
die.

Based on my knowledge, there are many similarities and differences between plants and animals.

- Animals have different way to get food. But plants make their food. And animals don't need sun like plants do. Animals have fur, shells and other stuff protection + their self like plants don't have fur and other stuff.

- Both the both die but in different ways. They also both live in different types. And have two different ecosystems. They both have genders they both adapting.

- Plants need H_2O . And plants make their own food like animals find food. And plants produce clean air.

Based on my knowledge, there
are many similarities and
differences between plants

and animals. Plants have female
parts and male parts and did you know plants
make food yes. Plants make food

roots help make the food when

it rains the roots suck up the water
and the plants make food. Animals
have to find food every day they
can't make their food like
plants.

based on my knowledge,
There are many similarities
and differences between
plants and animals.

These are some facts
about plants I know.

Plants are the only thing
that can reproduce using seeds
and that can grow roots
into the ground, and
plants create food using
photosynthesis.

Now these are some
facts about animals I
know.

I know that animals
are consumed, and that
they reproduce by laying
eggs or giving birth, and
animals don't have
roots.

Based on my knowledge, there are many similarities and different between plants and animals.

Both 1 Here are what Animals and plants have in common things. Animals and plant live in water and land. They have different factors!

Animals 2 Now we are working on Animals! Animals are fat or skinny some have big or small feet they can move
